FOLIAR SPRAY SCHEDULE

Day of the Week:

Solar Rain
CalMag Fuel
Silica Skin
Lush Green
Peak Bloom

Su	Mo	Tu	We	Th	Fr	Sa
	20mL				20mL	
			20mL			
	20mL					
			10mL			
					5mL	

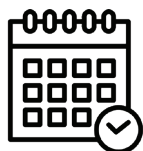

INSTRUCTIONS

For one gallon of spray, measure amounts listed above. Adjust as needed to make more or less solution.

Mix & spray immediately, and do not adjust the pH! Saturate top and bottom of leaves well. Discard any remaining solution. Wash the spray tank and make sure the lines & nozzle are clean too!

Foliar sprays can safely be applied from the beginning of veg until approximately day 14 - 21 of flowering.

TIPS & TRICKS

If you've never applied foliar nutrients before – start off with a small number of plants and work your way up to the full garden once you get a feel for how your plants react.

Spray at any time of day – try applying before sunrise, during the middle of the day, or at night, and see what your plants respond to best.

You can spray while lights are on; but test a small number of plants first and work your way up from there. Dimming the lights is always a safe bet.

If you want suggestions for other combinations, email us and we'll help you build the right foliar program!

USE RATES ARE IN MILLILITERS PER GALLON

1/2 tsp = 2.5 mL • 1tsp = 5mL • 1 Tbs = 15mL • 1 oz = 30 mL • 1 Gal = 3.8 L
